FEEDBACK RECEIVED — MIKE ROSE

Feedback from colleagues, reviewers and clients, in their own words. Names of people and clients are withheld.

Lenovo PCCW Solutions

Client stakeholders, multi-cloud Databricks platform engagement (relayed via a colleague) — 2026

About: Multi-cloud Databricks platform, Lenovo PCCW Solutions

"The presentation was well done, and much better than the previous team who took on the same design exercise."

Accenture

Project lead, luxury retail data programme — 21 Aug 2025

About: Report rationalisation for a luxury retail data programme, Accenture

"Mike worked as a Business Analyst for the data programme from June to August 2025, where he had to understand, collect and document the behaviors and patterns of business users in regard to the consumption of business reports hosted in a platform that was expected to be decommissioned. In total, there were +150 reports in the scope, and users were spanning from C-level to working level. Mike managed to work in full autonomy, and delivered expected deliverables (e.g., gap analysis, user list for each report in scope, findings summary) on time which were highly appreciated by his client counterparts. As one of the key project leaders, I can tell that Mike is a dedicated, reliable and efficient person who can navigate customer expectations by himself. I also appreciated his professionalism while scope was uncertain and I would be keen to work with him in the future."

Performance reviewer, Accenture — 22 Aug 2025

About: Report rationalisation for a luxury retail data programme, Accenture

"He implemented a Power Automate solution to send tailored messages to over 300 users, a process that would have been highly manual and time-consuming. By combining Python programming with functional analysis, he developed a methodology to assess data field similarities and group reports into use cases. Even in periods of scope uncertainty, he maintained professionalism, managed expectations effectively, and built lasting trust with the client's leadership team."

Performance reviewer, Accenture — 11 Aug 2025

About: AWS landing zone multi-workstream enhancement, Accenture

"Throughout the landing zone renewal contract enhancement projects, he demonstrated complete self-sufficiency, independently running topics from initiation to closure with minimal guidance. Serving as the overall Project Manager, he effectively coordinated and managed team members, including those one to two levels higher than him, demonstrating strong leadership, respect, and influence. The client commended his exceptional ownership and problem-solving skills, noting his proactive approach to tackling challenges even those outside his direct scope and his willingness to challenge feedback constructively when a better approach was possible."

Performance reviewer, Accenture — 11 Aug 2025

About: Google Cloud landing zone build, Accenture

"Mike demonstrated exceptional adaptability and technical acumen when assigned a new task outside his core area of expertise working on a Google Cloud–based project. Starting from scratch, he proactively acquired the necessary skills. He successfully designed, implemented, and single-handedly set up a Google Landing Zone for the client with minimal assistance. The deployment was executed with meticulous attention to detail, resulting in close to zero issues or breakage."

Performance reviewer, Accenture — 26 Aug 2025

About: Accenture, readiness for a team lead role

"I believe Mike is well-positioned to excel in this role, as he has already demonstrated his ability to oversee and deliver complex projects while collaborating with team members of higher career levels and greater years of experience. His past experiences show that he can effectively guide discussions, align the team toward common goals, and earn the client's trust through consistent delivery."

Senior colleague, cloud practice — 25 Aug 2025

About: AWS landing zone multi-workstream enhancement, Accenture

"Mike has demonstrated outstanding capability in managing client and customer relationships. His proactive engagement with clients, regularly addressing their queries on a weekly basis, reinforces customer confidence in Accenture's capability to deliver quality outcomes. During the enhancement, he coordinated seamlessly with other technical SMEs, gaining an understanding of their domains and ensuring alignment across workstreams."

Senior colleague, cloud practice — 25 Aug 2025

About: Google Cloud landing zone build, Accenture

"Mike has successfully delivered the Google Landing Zone as part of the enhancement project, managing the solution end-to-end. He has quickly picked up Google Cloud knowledge and demonstrated the capability to handle the Google platform independently. In addition, he already possesses strong expertise in AWS and is capable of managing both AWS and Google tasks effectively."

Teammate, landing zone team — 6 Apr 2025

About: AWS landing zone multi-workstream enhancement, Accenture

"Mike has been a great asset in the Landing Zone team as an overall project manager, ensuring that tasks are on track and obstacles are resolved. He has demonstrated strong competence in overseeing multiple workstreams and transitioning projects from delivery to operations mode and delivering value to clients. Mike is fast to pick up new technologies, such as Amazon QuickSight for dashboards."

Senior colleague, cloud practice — 27 Mar 2025

About: AWS landing zone multi-workstream enhancement, Accenture

"He took full ownership of the end-to-end delivery, including project management, technical implementation, and direct customer coordination. Additionally, Mike independently led the Google Cloud Landing Zone project, which involves managing multiple pillars and complex integrations. He has already delivered 95% of the landing zone enhancement work, showcasing his ability to handle high-responsibility tasks with efficiency and precision."

Performance reviewer, Accenture — 27 Aug 2024

About: Accenture

"He does not simply agree with feedback but challenges it when he believes there is a better approach. Even during setbacks, he maintains a positive attitude and a collaborative spirit. Mike has demonstrated strong leadership qualities by guiding and mentoring junior team members. His innovative ideas and willingness to implement new strategies have led to significant improvements in the project's workflow."

Colleague, landing zone enhancement — 26 Aug 2024

About: AWS landing zone multi-workstream enhancement, Accenture

"Great job, Mike. Managing the overall delivery for the enhancement modules was well managed."

Colleague, government ITSM and landing zone projects — 21 Aug 2024

About: Government ITSM platform on AWS, Accenture

"As part of the technical architecture team for the project, you've excelled in setting up MariaDB and handling high-availability configurations. Your expertise has made you the go-to person for MariaDB setup. Your skill in collaborating with clients to understand their requirements and deliver quality results has been outstanding. Your ability to collaborate effectively with the junior people and guide them has been invaluable. Consider documenting your setup processes and troubleshooting tips to create a knowledge base for the team."

Project lead, government ITSM project — 21 Aug 2024

About: Government ITSM platform on AWS, Accenture

"Doing well: independently drives the technical architecture topics across internal workstreams and engages effectively with external stakeholders such as the client's IT team and architects. Demonstrated strong capability of independently setting up, troubleshooting, and resolving complex issues such as ServiceNow and MariaDB with minimal supervision. Significant contribution to backup and restoration strategies, helping the project to achieve compliance to go live on 8 Jul 2024. Do better: grow competency in technical architecture operations, to bring better operational considerations into the design stage. Do next: grow skills in business development and proposal shaping."

Project manager, government ITSM project — 21 Aug 2024

About: Government ITSM platform on AWS, Accenture

"Mike has steadily become one of the most trusted technical architecture supports in my eyes. He has become a MariaDB expert, especially in MariaDB clustering and configuring MaxScale for disaster recovery. He recognised the faults in the configuration made by the in-house MariaDB expert and was able to rectify them. He took over the role of another lead in managing the technical architecture workshops and handling the client's technical architect, and managed the whole track on his own. On project go-live support, he competently tackled the technical go-live issues even though time was of the essence. I see Mike growing into a lead role, passing his troubleshooting skills to the junior members."

Project lead, government ITSM project — 5 Aug 2024

About: Government ITSM platform on AWS, Accenture

"Thank you for your contributions! You were literally the bedrock: you were there when we needed you, providing excellent technical architecture support and resolving MariaDB issues."

Team lead, public-sector API and batch project — 18 Apr 2022

About: Accenture, functional analyst work

"Mike was a functional analyst on the project, where he was involved in the designing and building of APIs and batch programs for the client. Due to the uncertainties of the client's requirements, his progress had been impacted. Nonetheless, his eagerness to learn and adeptness in grasping new and complex technical concepts shone through. He took the initiative to clarify his doubts with various teammates and built a strong understanding of the framework quickly."

Project manager, public-sector business analysis engagement — 28 Mar 2022

About: Accenture, business analyst work

"You have been an effective Business Analyst despite having joined the project without any prior experience in Agile delivery or knowledge of the technical architecture. You have proven to be an adaptive analyst as you picked up the role and knowledge very quickly. One recommendation to expand your working knowledge in cloud and technical architecture is to engage project members in the technical architecture team to learn by their side."
